Title: A High-Resolution Finite-Difference Benchmark for Steady Continuation and Hopf Bifurcation Dynamics up to Extreme Reynolds Numbers ($Re = 100,000$) in 2D Lid-Driven Cavity Flows

Author: Kartikeya Gangwar

Highlights (Each bullet strictly ≤ 85 characters including spaces):

- Exact $\mathcal{O}(N^2 \log N)$ DST-I Poisson solver eliminates iterative residual drift.
- Pure central differencing achieves zero artificial viscosity up to $Re = 50,000$.
- Localized hybrid scheme regularizes corner shocks at $Re = 100,000$ on 1025×1025 .
- Symmetric core convergence confirms Batchelor's asymptotic theorem at high Re .
- Time-accurate 513×513 marching maps Hopf bifurcation cascades to $Re = 100,000$.
